DECENTRALIZED CELLPHONE INSURANCE

Why decentralized cellphone insurance?

Insurance should be decentral

- We believe insurance is naturally decentral so it is possible to cut the middle man (the insurance company) from the process of risk coverage in between a community. We work towards that goal.

Data is available

- Mobile insurance is a good use case because object-specific information (IMEI, detection of broken glass) is digitally available and can be parametrized

Market is growing

- Mobile insurance market is a rapidly growing (10%/yr) market within the insurance sector, with a potential market size of 27bn\$ in 2020¹

Our team

Jonathan

Product lead

Eugene

Business
development

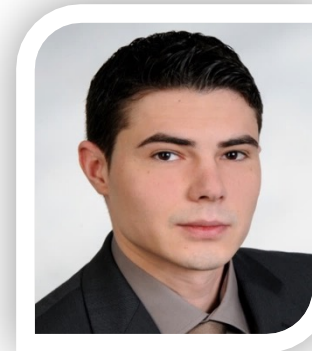

Aleksey

Lead Architect

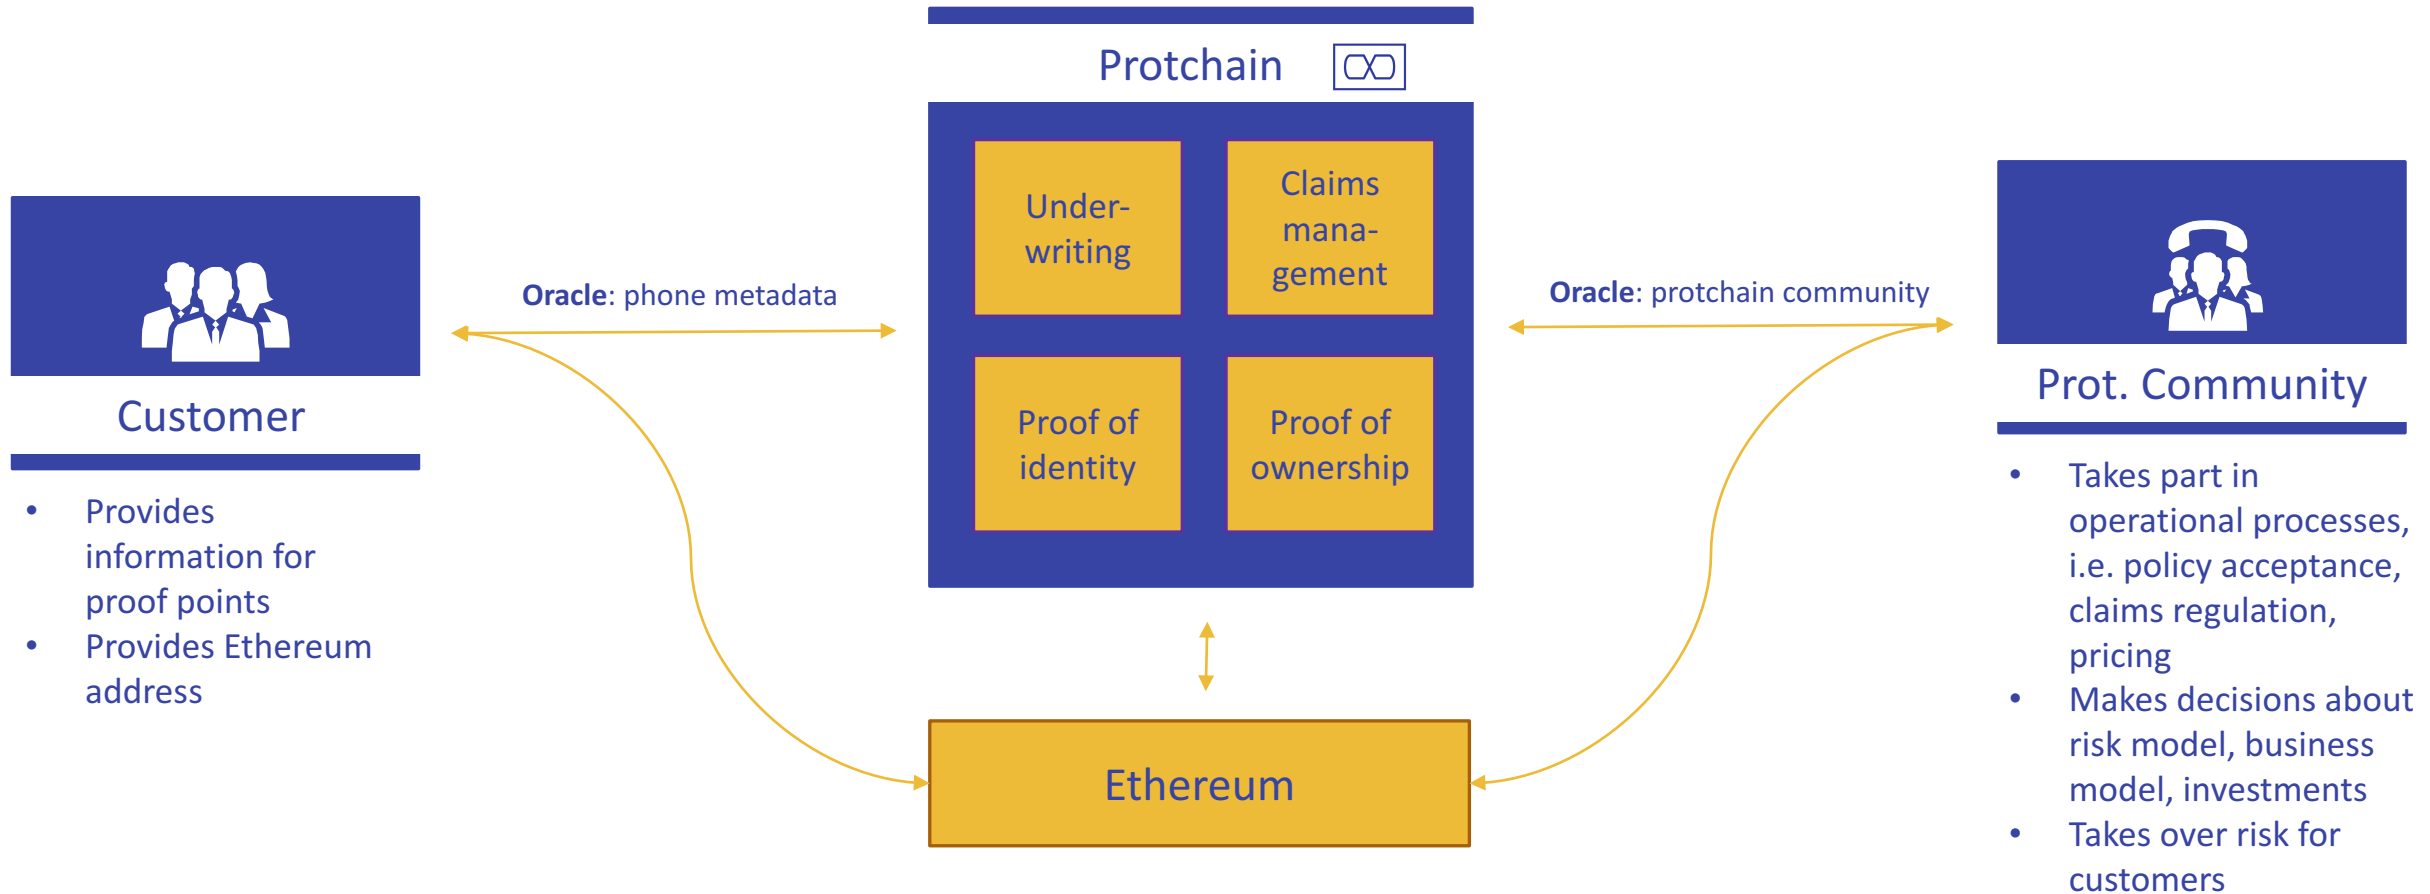

Waldemar

Blockchain engineer

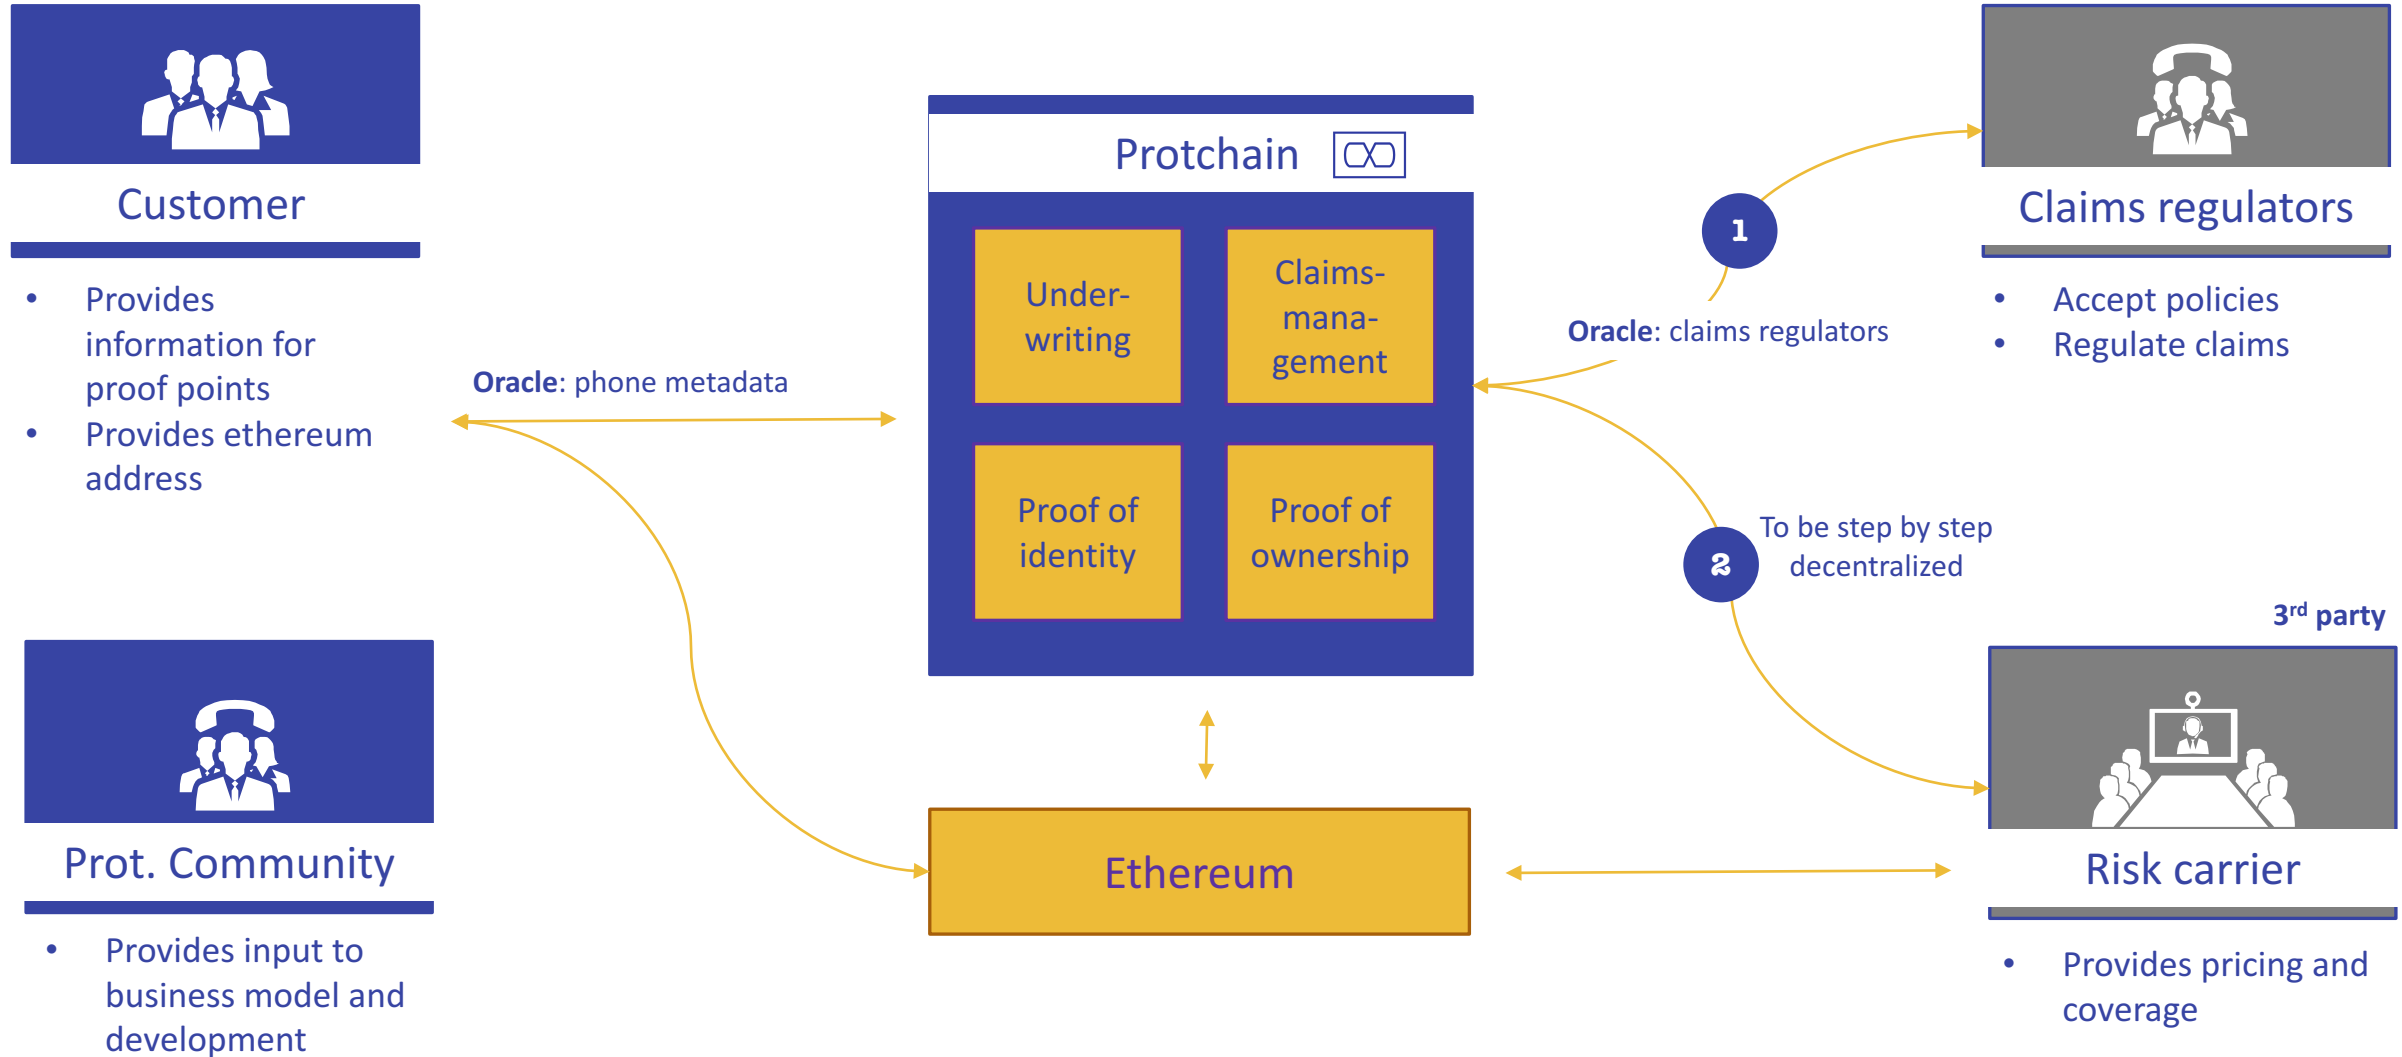

What's the idea?

protchain aims to let all relevant insurance processes be driven and supported by the community

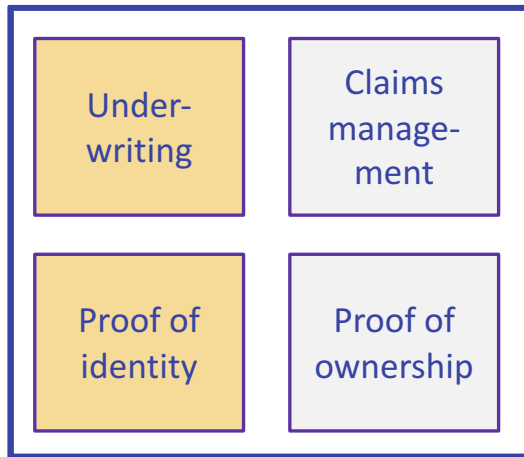

Initial product

Protchain implements main processes in mobile insurance

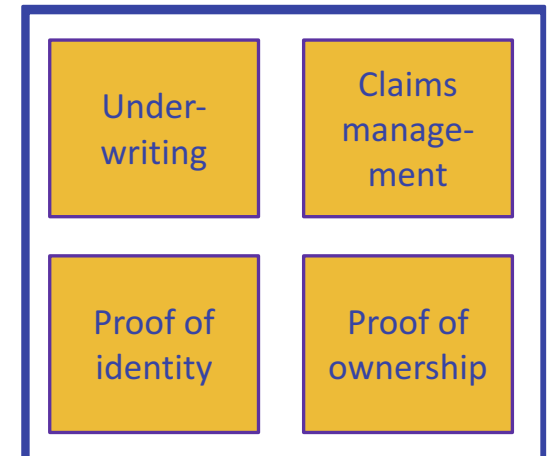

Our strategy

The road to decentralize cellphone insurance will follow the growth of the blockchain ecosystem

- Growth of blockchain ecosystem
- Regulatory adaptation
- Mainstream adaptation

centralized

decentralized

Where we are and what's next?

Project needs to grow with respect to team and investment

- ✓ The team is working on prototype, the concept and business development
- Complete Prototype with
 - Customer UI
 - UI for claims handling
 - External API for claims handling and risk carry-over
- Negotiate partnerships for
 - Risk carrier
 - Claims handling
- Focus on community development and growing ecosystem

It's time for decentralization
